## S U M M A R Y

Full-stack Software Developer with hands-on experience building scalable backend services, responsive web interfaces, and AI-integrated applications. Proficient in Python, TypeScript, React, and Node.js with production experience in distributed systems, real-time communication, and cloud deployments. MS in Computer Science (3.91 GPA).

## T E C H N I C A L   S K I L L S

**Languages:** Python, TypeScript, JavaScript, SQL, Rust

**Frontend:** React, Next.js, HTML5, CSS3, Tailwind CSS, Zustand, React Query

**Backend & APIs:** FastAPI, Flask, Node.js, NestJS, REST API design, GraphQL, WebSockets, Server-Sent Events (SSE)

**Databases & Caching:** PostgreSQL, MongoDB, Redis, SQLAlchemy

**Cloud & DevOps:** Docker, CI/CD pipelines, AWS S3, cloud deployment (Render, Vercel), automated testing, microservices

**AI & Tooling:** LLM-based systems, prompt engineering, Anthropic Claude API, OpenAI API, AI-assisted development

## E X P E R I E N C E

**Heart, Artery & Vein Center of Fresno, Inc.** — Fresno, CA

Aug. 2025 – Present

*Full-Stack Developer (AI-Focused)*

- Designed and implemented a **production automation platform** used in daily operations, reducing a 20-minute manual workflow to 2–3 minutes per execution.
- Built fault-tolerant backend services using Python with asynchronous workers, queue-based execution, and object-storage-driven workflows.
- Implemented telemetry, audit logs, and access tracking to ensure system observability, reliability, and operational accountability.

**California State University, Fresno** — Fresno, CA

Jan. 2025 – May 2025

*Hibiki AI — Graduate Research Assistant — JavaScript, React*

- Developed React-based interfaces for distributed backend services; designed secure communication patterns between frontend and backend systems.
- Refactored client architecture to support faster iteration, **reducing feature delivery time by 30%**.

**YouGov Inc.** — Mumbai, MH, India

Sep. 2021 – July 2023

*Python Developer*

- Developed and maintained survey application systems using Gryphon (Python-based proprietary tool) and JavaScript for enterprise clients.
- Built automation tools that **reduced manual coding processes from 6–20 hours to single-click operations**.
- Coordinated with cross-functional client teams to gather requirements, translate business needs into technical specifications, and deliver data collection solutions.

## P R O J E C T S

**CollabCanvas** — Real-Time Collaborative Design Board

[Live](#) | [Code](#) *React, TypeScript, Konva.js, Yjs CRDT, FastAPI, WebSockets, PostgreSQL, Redis, OAuth 2.0*

- Architected Figma-like collaborative canvas using **Yjs CRDT for conflict-free multi-user synchronization** with pycrdt-websocket backend handling document persistence and binary WebSocket broadcasting.
- Built real-time cursor tracking, presence panel, and role-based sharing (owner/editor/viewer) with secure invite-link generation and cross-tenant board isolation.
- Engineered end-to-end infrastructure: JWT-authenticated WebSocket connections, OAuth 2.0 (Google/GitHub), PNG/SVG/JSON export, and Vercel + Render cloud deployment.

**Koda** — AI Coding Agent

[Live](#) | [Code](#) *React 19, TypeScript, FastAPI, PostgreSQL, WebSocket, Anthropic Claude API, Tree-sitter, Monaco Editor*

- Architected **multi-phase agentic orchestration** (understand → plan → execute → approve) with recursive tool-use chaining loop supporting 7 tools for autonomous multi-step coding task completion.
- Built real-time execution transparency using FastAPI WebSocket streaming of agent reasoning with sub-second latency and live visualization of tool calls.
- Designed secure BYOK system with encrypted API key storage, JWT/OAuth authentication, GitHub integration for automated PR creation, and **cost-optimized model routing reducing API costs by 40%**.

**PromptLab** — LLM Experimentation & Evaluation Platform

[Live](#) | [Code](#) *Python, FastAPI, Rust, PostgreSQL, Redis, SSE, React, TypeScript, Docker*

- Built AI experimentation platform with real-time SSE streaming, A/B testing framework, and feedback loops; designed architecture supporting **10K+ concurrent connections and 2,000 QPS**.
- Developed Rust microservice for token estimation achieving **<1ms latency**; integrated with Python backend with automatic fallback for high availability.
- Implemented end-to-end observability: structured logging with trace IDs, per-request cost tracking, and live metrics dashboard displaying tokens, latency, and costs.

## E D U C A T I O N

**California State University, Fresno**

*MS in Computer Science — 3.91/4.0*

Fresno, CA

Aug. 2023 – May 2025

**KJSIEIT, Mumbai University**

*Bachelor's in Engineering, Information Technology*

Mumbai, MH, India

Aug. 2016 – Oct. 2020
